Machine Learning · Human–Computer Interaction
hello@example.com | github.com/example | Personal Website

Education

University of Washington

M.Sc. in Computer Science

2024 - 2026

Research focus: trustworthy AI systems, interactive machine learning, and human-centered evaluation.

Coursework: machine learning, natural language processing, experimental design, and information visualization.

University of Toronto

B.Eng. in Computer Science

2020 - 2024

Completed a capstone on accessible information retrieval; designed the evaluation protocol, implemented a working prototype, and documented findings for future development.

Research Experience

Microsoft Research

Research Intern · Human–AI Interaction

2025.06 - 2025.09

- Designed evaluation protocols for language model interfaces, combining task-based user studies with reproducible experiments; defined quality rubrics, annotation guidelines, and error categories.
- Built data processing pipelines for interaction logs and survey responses; analyzed model behavior across task types and translated findings into interface and feedback design recommendations.
- Collaborated with researchers and designers to prototype citation, correction, and uncertainty features; prepared research summaries, experiment documentation, and reusable study materials.

Human-Centered AI Laboratory

Research Assistant

2024 - Present

- Investigated how users verify AI-generated answers and recover from errors; developed interview guides, recruited participants, and synthesized qualitative findings with behavioral evidence.
- Maintained experiment configurations, versioned datasets, and analysis notebooks to support transparent reporting and replication by other lab members.

Publications

- Jack**, Lee, J. (2026). *Evaluating Interactive AI Systems in Real-World Tasks*. Example Conference. Paper
- Lee, J., **Jack** (2025). *A Framework for Reliable Human–AI Collaboration*. Example Workshop.

Skills

Python · PyTorch · TypeScript · SQL · Experimental Design · Qualitative Research · Scientific Writing

Selected Projects

Open Research Toolkit

- Developed an open-source toolkit for organizing experiments, tracking results, and reproducing evaluation runs; added configurable metrics, dataset validation, and exportable comparison reports.
- Maintained contributor documentation, example datasets, and automated checks; collected feedback to improve setup, debugging, and collaboration workflows. GitHub
